**Six Swing States**

7 September 2020

## Methodology

Arizona		Pennsylvania	
Sample Size:	830	Sample Size:	1053
Fieldwork Dates:	30.08.2020 - 04.09.2020	Fieldwork Dates:	30.08.2020 - 03.09.2020
Margin of Error:	3.40%	Margin of Error:	3.02%
North Carolina		Michigan	
Sample Size:	951	Sample Size:	967
Fieldwork Dates:	30.08.2020 - 03.09.2020	Fieldwork Dates:	30.08.2020 - 03.09.2020
Margin of Error:	3.18%	Margin of Error:	3.15%
Florida		Wisconsin	
Sample Size:	1093	Size:	670
Fieldwork Dates:	30.08.2020 - 03.09.2020	Fieldwork Dates:	30.08.2020 - 04.09.2020
Margin of Error:	2.96%	Margin of Error:	3.78%

**Interview Method:** Online Web Survey (compatible with both computers & smartphones). Survey questions were available in English and Spanish.

**Populations Sampled:** Representative samples of *registered voters* in Arizona, Florida, Michigan, North Carolina, Pennsylvania, Wisconsin.

**Sampling Method:** Representative samples were selected through registered panel providers.

**Weighting:** Data weighted according to the profile of adults (18+) in each state. Data weighted by age, gender, region, education level, race, and 2016 Presidential Election Vote. Targets for age, gender, education, and race were derived from the 2018 American Community Survey 5-Year Estimates.<sup>1</sup> Targets for region based on the county-level estimates by the US Census; categorization of counties into regions our own.<sup>2</sup> Targets for past vote were derived from the official results of the 2016 Presidential Election.

**Turnout Weighting:** In order to best assess the current voting intention of the public, we asked respondents how likely they are to vote in the Presidential Election on November 3rd, based on a well-defined scale of 0 to 5, where each number is carefully defined as follows:

- 0 (Definitely will not vote)
- 1 (Probably will not vote)
- 2 (Leaning towards not voting, but could vote)
- 3 (Leaning towards voting, but might not vote)
- 4 (Probably will vote)
- 5 (Certain to vote)

Their likelihood to vote was then weighted to the subsequent answers they gave when asked whom they would vote for. The voting intention of those who responded '5' were weighted by a factor of 1.0, '4' by a factor of 0.8, '3' by a factor of 0.6, '2' by a factor of 0.4 and '1' by a factor of 0.2. Those who responded '0' were not asked at all whom they would vote, because it was considered that they would not vote.

For our voting intention questions for US Senate and State Governor elections, we presented respondents with a separate likelihood to vote question for those specific races in order to weight appropriately.

It is important to note that our turnout weighting does not aim to predict turnout itself but only aims to marry respondents' actual enthusiasm for voting to their stated voting preferences. Those who said they are not registered to vote in the States surveyed were excluded.

<sup>1</sup> For age, gender, race and education estimates, see: [data.census.gov](https://data.census.gov)

<sup>2</sup> For county-level data, see: <https://www.census.gov/data/tables/time-series/demo/pepsted/2010s-counties-total.html>

## Methodology

**Voting Intention:** After being asked their likelihoods to vote, respondents were then asked for whom they will vote in November if they were to vote. The possible responses, presented in a randomized order, were "Donald J. Trump (Republican)", "Joseph R. Biden (Democrat)", "Jo Jorgensen (Libertarian)", "Howie Hawkins (Green)", "Other (Third Party/Write-In)", and "Don't Know". The option "Kanye West (Independent)" was included in those states where he could still qualify to be on the ballot. Those who said they were certain not to vote were not prompted and were counted as 'won't vote'

Our voting intention results presented here incorporate respondents' stated likelihood to vote.

**Margin of Error:** Because only a subset of the American population was surveyed for this research, all results are subject to a margin of error. By consequence, not all differences are statistically significant, *especially among subsamples*.

The margin of errors provided above mark the range within which the true value falls if 50.0% of respondents gave a particular answer to a question—the worse-case scenario from the perspective of margin of error—at a 95.0% confidence level.

Subsample results from crosstabs are subject to a higher margin of error due to their lower sample sizes. Conclusions drawn from small subsamples should be treated with caution. *We particularly emphasize caution when reporting on any subsample figures where the base is below 50 respondents.*

\* Due to rounding, some percentages presented below may add up to 99 or 101.

\* Questions presented below are shown in the order that they were presented to respondents.

**Additional information:** Redfield & Wilton Strategies is a **member of the British Polling Council (BPC)** and abide by its rules.<sup>3</sup>
